SELF-CLEANING FILTRATION EXPLAINED

Our Self-Cleaning Models have a permanent Micro-Tex filter that offers the most advanced filtration technology available and provides superior motor protection and dust-free operation (up to 99.9% efficiency.) The filter bag is lifted as the power unit is turned on. Once the power unit is shut down, the weighted self-cleaning filter drops and displaces the accumulated dust and deposits it into the dirt canister. Dirt canister is emptied as needed.

FULLY CYCLONIC FILTRATION EXPLAINED

Full Cyclonic Separation is what makes our virtually maintenance-free larger models so powerful. Centrifugal force and gravitational pull are used to deposit dirt into the canister. Unlike other models, our fully cyclonic power units have no disposable bags or filters to obstruct airflow. The result is maximum suction at all times. Fine dust is exhausted outdoors, assuring a clean air environment. Our Split Power Units provide additional convenience with independent power units and dirt canisters.

A.C.V. Vacuum systems are easily recognized in the vacuum industry. Each and every one of our vacuums has been handcrafted using only top quality materials. You have our commitment to provide you with the excellence our customers worldwide have come to expect.
