## FULLY "CYCLONIC SEPARATION" FILTRATION EXPLAINED

Dirt laden air is pulled by the powerful motor into the dirt canister and is immediately directed into a cyclone configuration. Centrifugal force and gravitational pull deposit the dirt in the canister. Air is then exhausted outside ensuring that allergens are not recirculated back into your environment. Because there are no bags or filters to obstruct airflow, the result is 100% suction at all times.

A.C.V. Vacuum systems are easily recognized in the vacuum industry. Each and every one of our vacuums has been handcrafted using only top quality materials. You have our commitment to provide you with the excellence our customers worldwide have come to expect.
